

## The Peatland Project Map

The Peatland Project Map is an online tool that showcases peatland projects, be they restoration, research, sustainable management, community engagement or communications. Although there is a focus on UK case studies, showing the extent of the work delivered by our peatland community, global examples are also being added to help facilitate knowledge sharing across the world.

### How do I get involved?

An easy two-step registration process allows you to add your own case studies (per site rather than project). The level of detail is up to you, but there is the opportunity to share site history, restoration methods, progress, photographs and set up a contact form. Visit [www.iucn-uk-peatlandprogramme.org/projects/how-to](http://www.iucn-uk-peatlandprogramme.org/projects/how-to) to register.

### What does it deliver?

The Peatland Project Map provides a simple representation of the extent of work achieved by the UK peatland community, whilst allowing members of the community to learn from the experiences of others. It also helps to highlight gaps in restoration work, allowing for prioritisation of effort.

### A short history

The Peatland Project Map is based on the Peatland Compendium, which was created following a 2009 Defra-funded project recording peat restoration activities and shared on a website originally managed by the Moors for the Future Partnership.
