

Land Decisions Made Simple.

Our platform makes it simple to plan and manage your land whilst helping you engage with local communities and stakeholders.

Carbon Calculators

It's important that our platform produces outputs that are 100% compatible with industry standard methods. We have integrated the **Peatland Code** and the **Woodland Carbon Code** into our platform so you don't have to deal with spreadsheets any more. You can change your assumptions in real-time to try out different what-if scenarios.

Engage

Considering a land use change? Why not publish your project to the Rethink Carbon website with our easy to use built-in tools, keeping stakeholders and communities in the loop. Include project timelines, 3D story maps, public polls, photo galleries, document links and more.

Compare Land Use Decisions

Land managers can easily try out several scenarios, comparing the environmental and financial impacts of different land management options - it's never been simpler to figure out the best way forward.

Save Time

Fed up of looking for the information you need across multiple websites? Rethink Carbon processes hundreds of datasets instantly, providing immediate insights into your land and easy access to funding opportunities..
